

# Hygiene Monitoring Systems: Protein & ATP Tests

Comparative analysis

## PRO1 MICRO PEN SYSTEM FOR SURFACE PROTEIN QUANTIFICATION

Unique quantitative system designed to be used after the cleaning process on any surface. Its design allows to reach areas of difficult access in complex instruments (such as serrated edges or box joints).

Swab

Get an accurate **quantitative result** automatically with Bionova® auto-readers.

**Optional visual qualitative analysis**

Stability: 24 months | 2-8 °C

**Protein absolute quantification system** designed to be used after the washing procedure.

## ATP S-1 PEN SYSTEM FOR SURFACE ATP QUANTIFICATION

Used on any surface after the washing / disinfection procedure. Specially designed for reaching areas of difficult acces on complex instruments, such as serrated edges or box joints.

Swab

**No color change.**  
Luminiscence detection mechanism.

**Luminometer-based read-out.**

**Portable system to detect and estimate ATP** from living pathogens and other living cells.
